Severity	Issue Description	Location in Interface	Heuristic(s) Violated	Notes
3	Inconsistent Button Styles	Throughout the interface	Consistency and Standards, Recognition rather than Recall	Buttons appear in various shapes, sizes, and colors, leading to confusion and uncertainty for users.
3	Lack of Clear Error Messages	Error messages throughout the interface	User Control and Freedom, Help and Documentation	Error messages are often vague or non-existent, leaving users frustrated and unable to understand the cause of the problem.

2	Complex Navigation	Main menu, submenus	Simplicity, User Control and Freedom	The navigation structure is convoluted, with numerous nested menus and unclear labels, making it difficult for users to find the information they need.
2	Insufficient Feedback	Various interactions	Visibility of System Status	The interface provides minimal feedback to user actions, leaving them unsure if their actions have been registered or processed.

2	Lack of Accessibility Features	Throughout the interface	User Control and Freedom, Help and Documentation	The interface lacks features like screen reader compatibility, keyboard navigation, and adjustable font sizes, hindering accessibility for users with disabilities.
1	Unclear Labels	Various form fields, buttons	Recognition rather than Recall	Labels for form fields and buttons are ambiguous or inconsistent, leading to user confusion and errors.

1	Lack of Search Functionality	Throughout the interface	User Control and Freedom, Help and Documentation	The absence of a global search function makes it difficult for users to quickly find specific information or features.
1	Cluttered Interface	Homepage, dashboards	Simplicity, Aesthetics and Minimalist Design	The interface is overloaded with visual elements, making it visually noisy and distracting, hindering user focus.

1	Lack of Progress Indicators	Long-running operations	Visibility of System Status, User Control and Freedom	For time-consuming actions, the interface lacks progress indicators, leaving users uncertain about the status of the operation.
1	Inconsistent Use of Terminology	Throughout the interface	Consistency and Standards	The same concepts are referred to using different terms in different parts of the interface, leading to confusion and cognitive overload.
